Because we do not want to offer a "cheap" service. How many hosting providers do you know that you could call when having a problem with your Windows software? and get FREE advice and help with setting up that software? We offer that and more to our hosted clients.

In short, we offer all hosted clients help and support 24/7, free of charge, by Skype or telephone, on any aspect of their Internet experience. From help setting up new email accounts in Outlook, Outlook Express etc. to installing a new web browser as an alternative to Internet Explorer. From help sizing images for their websites to help choosing the best free image viewer on the Internet. From help tracking down a virus to help setting up a new firewall as an alternative to Norton products that have slowed their machines down.

We offer all this and more in ADDITION to all the help you could possibly need in running your web hosting accounts and email setups.

This is why we are not cheap - because we treat our clients like gold!
